

BOROUGH PROJECTS:

DCNR Playground Grant:

The pavilion, handicap path and parking have been installed. The playground equipment is scheduled to be shipped on October 14th and installed shortly thereafter. Once the equipment has been installed, Pennell Services will be able to come back and finish up all the site work. The borough is very excited for the children of the borough to be able to take full advantage of this brand new playground. Thank you to DCNR and the York County Commissioners for making this a possibility.

CDBG Grant

There has been no update on the grant to install new handicap ramps on Main Street and at the corner of High Street and Main Street.

Dirt Gravel Low Volume Road Grant

The borough did not get approved for the grant to do stormwater controls and paving on Church Lane off of High Street.

Multi Modal Grant

The borough has applied for a grant to do stormwater controls and full reclamation on Water Street and

Moore Lane from the Beaver Street Bridge to the Red Lion Avenue Bridge. The borough should receive notification this fall if we have been awarded the grant to do this much needed work.

Monday, Dec 6th ~ Council Meeting

Monday, Dec 13th ~ Budget Meeting

All meetings begin at 6:30 PM

Programs

The York County SPCA Spay/Neuter Clinic is located at the Brougher Companion Animal Shelter in York, PA. The Spay/Neuter clinic offers low-cost, high-quality spay/neuter services for dogs and cats in our community. The Spay/Neuter Clinic is a mission driven program, and has four overarching goals:

1. Provide spay/neuter services to as many animals in York County as possible.

Spay/neuter services not only prevent unwanted litters, but also provide numerous health benefits to our patients, including decreasing the risks of mammary cancer; eliminating chances of ovarian, uterine, and testicular cancer; and preventing life threatening conditions such as pyometra and testicular torsion. By preventing unwanted litters, we are decreasing the overall number of animals in our community who need homes.

2. Reach the underserved population of animals and pet owners.

There are many options for York County residents looking to have their pet spayed or neutered. While we accept all clients and their pets through the spay/neuter clinic, regardless of means or county residency, we are especially dedicated to providing care to those animals in York County who might otherwise not see a veterinarian.

3. Educate pet owners about common diseases and ailments.

While we do not function as a primary care veterinary office, additional medical services such as vaccines, preoperative blood work, and parasite control are available at the time of spay/neuter. Education regarding common diseases and ailments can be provided by trained veterinary technicians. Pet owners are

asked to follow up with their primary care veterinarian to ensure their pet receives any additional veterinary care he or she needs.

4. Provide excellent medical care at an affordable cost.

While our primary goal as a high-quality, high-volume spay/neuter clinic is to spay and neuter as many animals as possible in a safe and efficient manner, we also place great value on the individual medical care of each patient. Our clinic meets the AAHA standards of care, utilizes advanced anesthetic monitoring equipment, and employs staff with years of experience in high-volume surgery and veterinary medicine.

What is TNR?

OVERVIEW: TNR (Trap-Neuter-Return) is a method of spay/neuter for outdoor, free-roaming cats. Community cats rapidly reproduce, causing overpopulation, animal suffering, and high kitten mortality. Participating in TNR is the only proven way to humanely decrease the population of free-roaming community cats.

PROCESS: Call (717) 764-6109 ext. 302 or please email clinic@ycspca.org to make appointments for surgery if you wish to bring multiple cats at a time.

- We do accept walk-ins, one cat per person per day, dropped off between 8:00- 8:30am Monday through Wednesday. These walk-ins will have surgery after all scheduled appointments, so we cannot guarantee these cats will get surgery the same day as drop off. Cats eligible for this program **must** be in a humane trap, not a carrier.

Trap the cat(s) and bring them to us.

- Cats must weigh 3 pounds (approximately 12 weeks old) to have surgery and receive a rabies vaccine. Cats are sedated and then

weighed – if a cat is too small, the \$15 fee will not be refunded in order to cover the cost of sedation/anesthesia.

- For the safety of the cat, yourself, and our staff, all cats must come in a humane, live-release trap. Free-roaming cats are of unknown rabies status, and cannot be handled awake. The humane trap allows staff to sedate the cat through the bars of the trap and safely handle the cat once it is asleep. The York County SPCA has traps available to rent for a \$60 refundable deposit. Please call (717) 764-6109 to rent a live-release trap.
- Always provide fresh water for cats, regardless of age.
- Always cover the trap with a sheet, towel, or blanket. This provides a much needed sense of security for the cat during transport.
- Make sure the trap is set in a safe place where the cat cannot be affected by inclement weather or extreme temperatures.

All patients will receive a spay/neuter surgery and rabies vaccination.

- Cats' left ears will be tipped to indicate that they have been spayed/neutered and vaccinated for rabies.
- Cats will also receive a green scoring tattoo, a universal sign that the cat has been spayed/neutered.
- You may opt for additional vaccines, FELV/FIV testing, flea treatment, and additional parasite treatment. These services can be discussed and chosen at the time of drop off.
- A veterinary technician will examine the cat after he/she is under anesthesia and alert the doctor to any abnormalities. You will be contacted by phone while the cat is under

anesthesia if further treatment is recommended.

Pick up and return the cats to their outdoor home.

- For surgeries performed Monday through Wednesday, all TNR cats will stay overnight and will be available for pickup at 8:00am the following day.
- Cats that have arrived in traps will not be transferred to a carrier at pick up for safety reasons. Ideally, the cat should not be released for 24 hours after surgery. It is very important that the cat is kept safe and dry inside the trap at least overnight prior to releasing. This will give the cat time to better recover from surgery. The only exception is if the cat is a nursing mother and must be returned to her kittens.
- You may also want to refrain from releasing the cat during inclement weather, such as rain or snow, so the surgical site can stay dry.

TRAP NEUTER RETURN ASSISTANCE:

If you are seeking assistance to trap and manage a colony of free-roaming cats, we can help.

The York County SPCA offers assistance by having a Field Services Agent set traps on your property and transport the trapped cats to and from our Spay Neuter Clinic for the care they need. This program includes transportation of the cats, spay/neuter surgery, and a rabies vaccine. Please note that there is a waiting list for this program.

Call (717) 764-6109 ext. 302 or email clinic@ycspca.org to schedule a Trap-Neuter-Return transport, to start helping cats in your community today.
